KINGDOM OF SAUDI ARABIA

Your Partner in Industrial Excellence & Technology.

COMPANY PROFILE

Who we Are

Black Saber Company is an integrated EPC and technology contractor based in Saudi Arabia, delivering across Civil, MEP, Plant Maintenance, Network Infrastructure, AI, and industrial support services. We deliver these disciplines through a single integrated team — from design and construction to maintenance and ongoing operation.. Aligned with the Kingdom's In-Kingdom Total Value Add (iKTVA) programme, we invest in local capability, supply chain, and workforce — supporting our clients' localisation commitments while delivering work to the standards their operations demand.

Our work is governed by a firm commitment to safety and to the standards our clients hold us to. We operate to recognised HSE and quality frameworks, plan every project around the protection of people, assets, and the environment, and treat a safe, on-time handover as the true measure of a job done well. That discipline is matched by a clear code of conduct: we deal with clients, partners, and authorities with transparency and integrity, we do what we commit to, and we hold ourselves accountable for the outcome. While our delivery is rooted in the Kingdom, we draw on a wider group presence across Doha, Dubai, China, and India — combining local execution with regional reach and an international supply chain to give clients a single, dependable point of delivery.

Our Vision

To be the premier industrial partner in the GCC, recognized for driving innovation and operational excellence across the Energy, EPC, Technology, and other sectors in alignment with GCC vision.

Our Mission

To provide high-performance industrial solutions by integrating advanced technology with robust engineering, infrastructure and logistics. We are committed to delivering long-term value to our partners through operational excellence, safety, and a deep alignment with the industrial localization goals of the Kingdom.

Our Values

T — Transparency

Open and honest dealings with clients, partners, and authorities at every stage.

R — Reliability

We deliver on our commitments, on schedule and to specification.

U — Unity

One accountable team across all disciplines, working in close partnership with our clients.

S — Safety

The protection of people, assets, and the environment takes precedence in all we do.

T — Technology

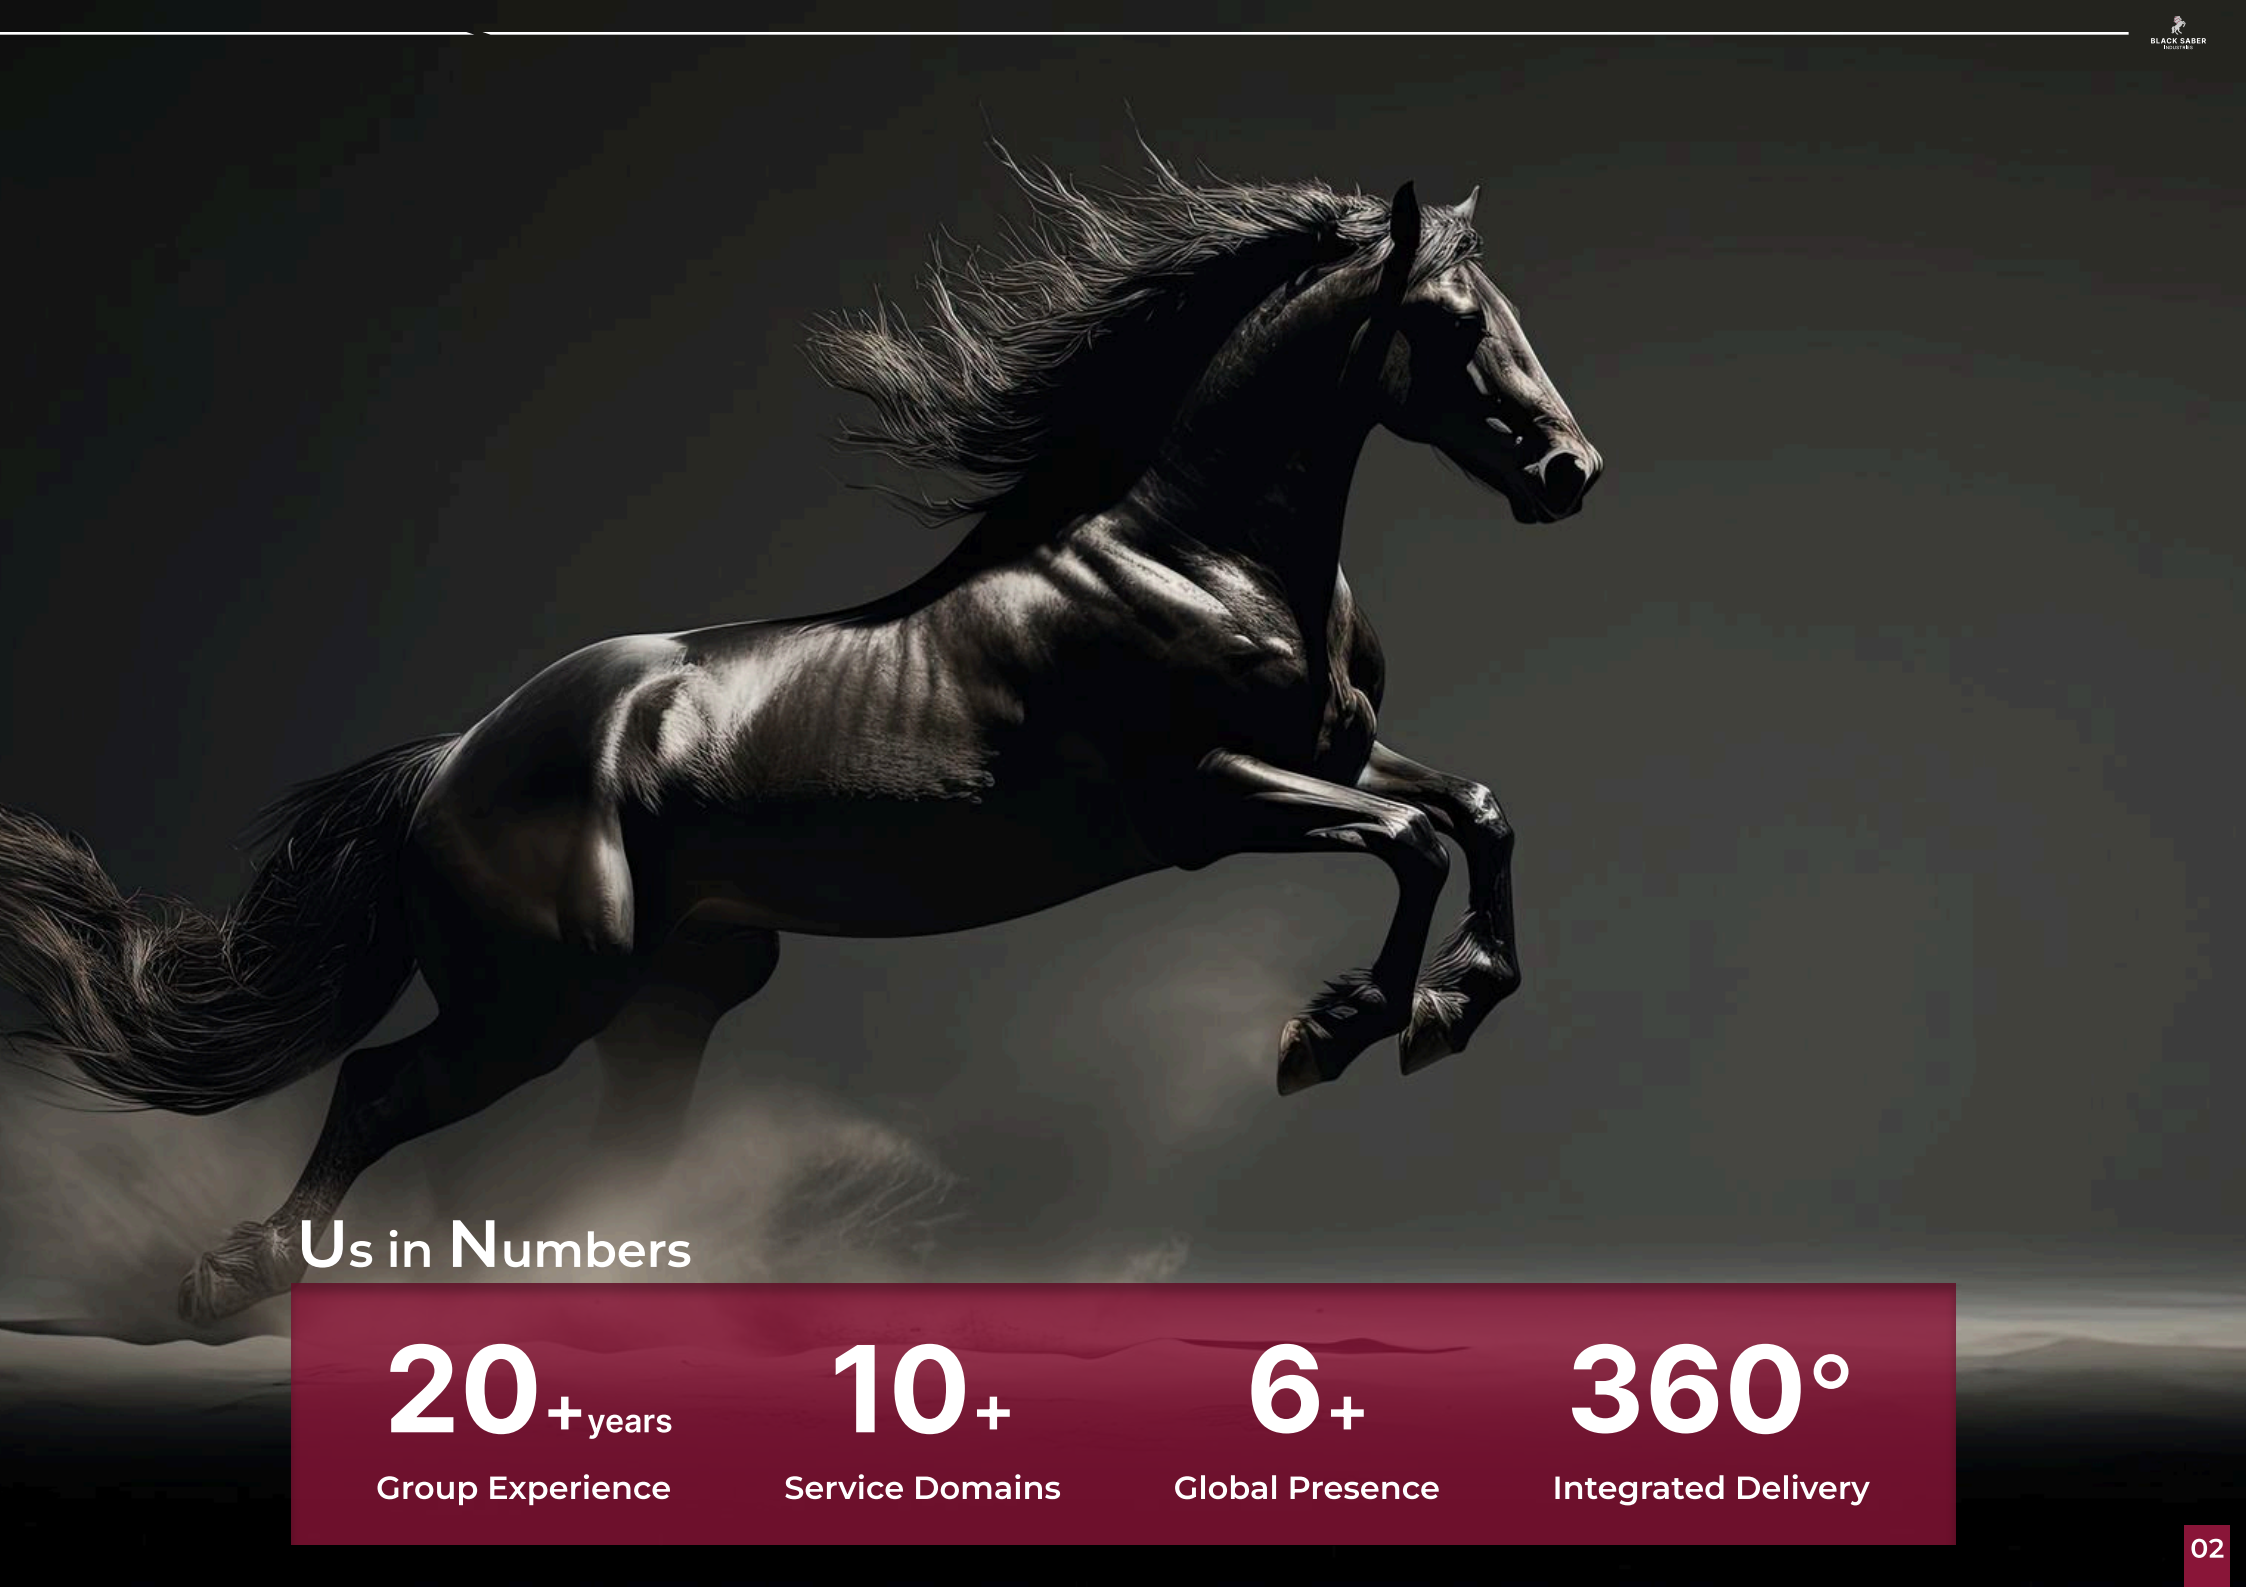

We apply innovation and intelligence across everything we engineer and build.

E — Excellence

Quality delivered to code and to standard, consistently.

D — Dedication

Committed to our clients' success, from design through to long-term operation.

Industries We Serve

01 Oil & Gas

We serve the full spectrum of onshore and offshore operations — delivering field-proven solutions and supplying critical equipment across the entire project lifecycle.

02 Petrochemical

We support refineries and process complexes through engineered EPC execution, plant upgrades, and integrity works — sustaining safe, continuous, and efficient operations.

03 Power & Energy

We deliver across conventional and renewable generation — solar, wind, and grid-connected systems — executing electrical and mechanical works that strengthen reliable, sustainable power.

04 Construction

We execute civil, structural, and MEP works for industrial and commercial assets — engineered to specification, built to code, and delivered to schedule.

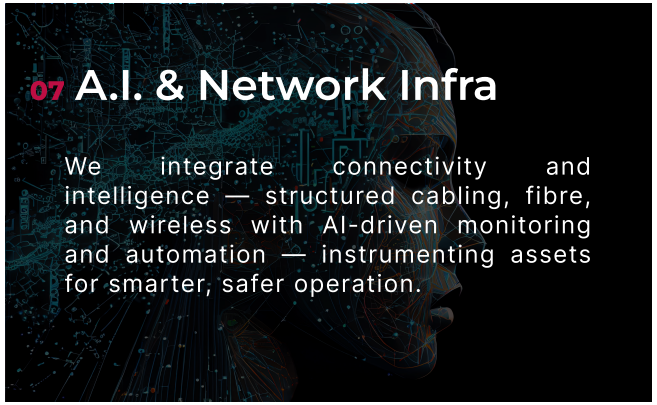

05 Industrial Facilities

We provide plant support, fabrication, and maintenance for manufacturing and heavy-industrial facilities — keeping production lines running at full capability.

06 Mining & Metals

We support mining and metal-processing operations with heavy equipment services, plant maintenance, and industrial solutions engineered for high-demand environments.

07 A.I. & Network Infra

We integrate connectivity and intelligence — structured cabling, fibre, and wireless with AI-driven monitoring and automation — instrumenting assets for smarter, safer operation.

08 FM & Support

We provide integrated facility management — hard and soft services, skilled and unskilled manpower, and catering — to support the continuous operation of industrial and project sites.

09 Logistics

We move what industry depends on — onshore rig moves, heavy equipment transport, and equipment rental, delivering reliable logistics across the project lifecycle.

Our Facility

Black Saber operates from a fully integrated industrial facility spanning 1,000,000 m² in the Dammam region, Eastern Province, Saudi Arabia. Designed to support our diverse business lines, the facility combines workshop, warehousing, and yard operations — enabling efficiency, quality, and scalability across every project we undertake.

Key Features

- Workshops — Equipped for industrial maintenance, fabrication, machining, and assembly of oil & gas equipment, spare parts, and engineered components for onshore and offshore applications.
- Logistics Yard — Dedicated space for equipment storage, mobilization, rig moves, and heavy vehicle operations.
- Warehouse — Stocking of spare parts, consumables, and critical inventory for Oil & Gas, EPC, and industrial projects.
- Technology & Control Centre — Allocated for AI, automation, and monitoring systems supporting advanced industrial applications.
- Office Complex — Housing management, engineering, and operations teams, ensuring seamless coordination across all divisions.

Strategically located in the Dammam industrial region, the facility offers close proximity to major clients, ports, and industrial zones across the Eastern Province — enabling rapid mobilization and reliable delivery throughout the Kingdom and the wider GCC. It reflects Black Saber's commitment to building a sustainable, future-ready industrial base that supports regional growth and self-sufficiency.

Our People

Engineering Excellence Across Every Discipline

BSI's workforce represents the industry's finest—engineers who design critical systems, technicians who ensure flawless execution, fabricators who build to exacting standards, safety professionals who protect every operation, and QA/QC specialists who guarantee quality at every stage.

From fabrication facilities and engineering offices to offshore platforms and remote project sites, our teams operate with precision, accountability, and an uncompromising focus on delivering results that exceed expectations.

Our Culture

The Principles That Guide Everything We Do

Our culture reflects our core values-the non-negotiable standards that shape how we work, make decisions, and treat each other.

Safety First, Always

Zero harm is the only acceptable outcome. Every individual deserves a safe workplace. Our zero-incident commitment shapes every decision, every procedure, and every action across all operations.

Integrity in Action

Accountability, transparency, and ethical conduct define our relationships with clients, partners, and each other. Our word is our bond.

Operational Excellence

High standards drive everything-from engineering to execution. We deliver technical precision, quality craftsmanship, and reliable performance on every project, every time.

Workmanship

Excellence is built through skill and precision. We take pride in workmanship. Our people bring professional certification, deep technical knowledge, and hands-on experience to every project-from complex engineering to critical field operations.

Our Presence & JVs

Headquartered in the Dammam region of Saudi Arabia, Black Saber operates as part of a wider group with reach across Qatar, the UAE, China, and India — uniting local delivery with regional operations, international sourcing and manufacturing, and engineering depth.

Through strategic joint ventures and partnerships, we extend our capability beyond our own resources, drawing on specialised manufacturing, advanced technology, and decades of combined experience. These alliances strengthen our supply chain and assure clients that every project is backed by international expertise — sourced, engineered, and delivered wherever they operate.

Our group's joint ventures bring specialised global capability into every project we deliver. These include OEM manufacturing of oilfield equipment, industrial components, and engineered parts from China, the production of heavy-duty haulage trailers and transport units, and the development of artificial intelligence, automation, and digital monitoring systems in India. Together, these partnerships give Black Saber direct access to international manufacturing, advanced technology, and engineering depth — delivered locally, backed globally.

Chairman's Message

The Gulf is entering an era defined not by what lies beneath the ground, but by what we build above it. Across the Kingdom and the wider region, we are witnessing a fundamental reimagining of industrial identity — one where energy, advanced manufacturing, and artificial intelligence converge to shape a new economic order. This transformation is precisely the environment Black Saber Company was built for.

The Kingdom of Saudi Arabia stands at the forefront of this shift. Under Vision 2030, the nation is building an industrial economy that is more capable, more localised, and more self-reliant than ever before — and Black Saber is committed to contributing directly to that ambition. Our roots are here, and our mandate is clear: to deliver world-standard engineering and technology while building lasting value within the Kingdom.

As President of the Arab Union for Artificial Intelligence and Programming, I hold a firm conviction that AI is not a peripheral technology — it is the central nervous system of the next industrial revolution. At Black Saber, this belief is embedded into how we work. Across energy, infrastructure, and industrial operations, we apply intelligent systems that improve operational visibility, reduce risk, and unlock efficiencies traditional methods cannot reach. This is not a future roadmap; it is how we deliver today.

We also understand that our clients operate where there is no margin for error. Deadlines are binding, safety is non-negotiable, and the cost of underperformance extends far beyond a single project. That reality shapes how we work — with discipline, transparency, and genuine commitment to those we serve. We measure ourselves not by the scale of our portfolio, but by the trust our clients place in us, and our responsibility to honour it.

Supported by the strength of our wider group and its international partnerships, Black Saber is building toward a future where the Kingdom does not merely consume global technology, but produces and owns it. The infrastructure of tomorrow is being designed today — and we invite our clients and partners to build it with us.

Dr. Badr Al-Hajri

Chairman, BSI Group

Vice Chairman's Message

At Black Saber Company, our mandate has always been to bridge ambition and reality — to take the industrial goals of this region and deliver them as tangible, measurable outcomes on the ground. That is the standard our team is built around, and the commitment we bring to every client, every project, and every market we serve.

Behind every Black Saber engagement is a team of experienced engineers, project managers, technicians, and operations professionals who understand the demands of working in the Kingdom's most complex industrial environments. We invest in our people as deliberately as we invest in our infrastructure — because at the scale our clients operate, the quality of the team on the ground ultimately determines the quality of the outcome.

Our delivery is underpinned by the manufacturing and technology depth of our wider group and its international partnerships. This gives Black Saber the supply-chain strength and advanced industrial capability that few regional players can match — and we channel it directly into faster mobilisation, reliable execution, and dependable after-market support for our clients.

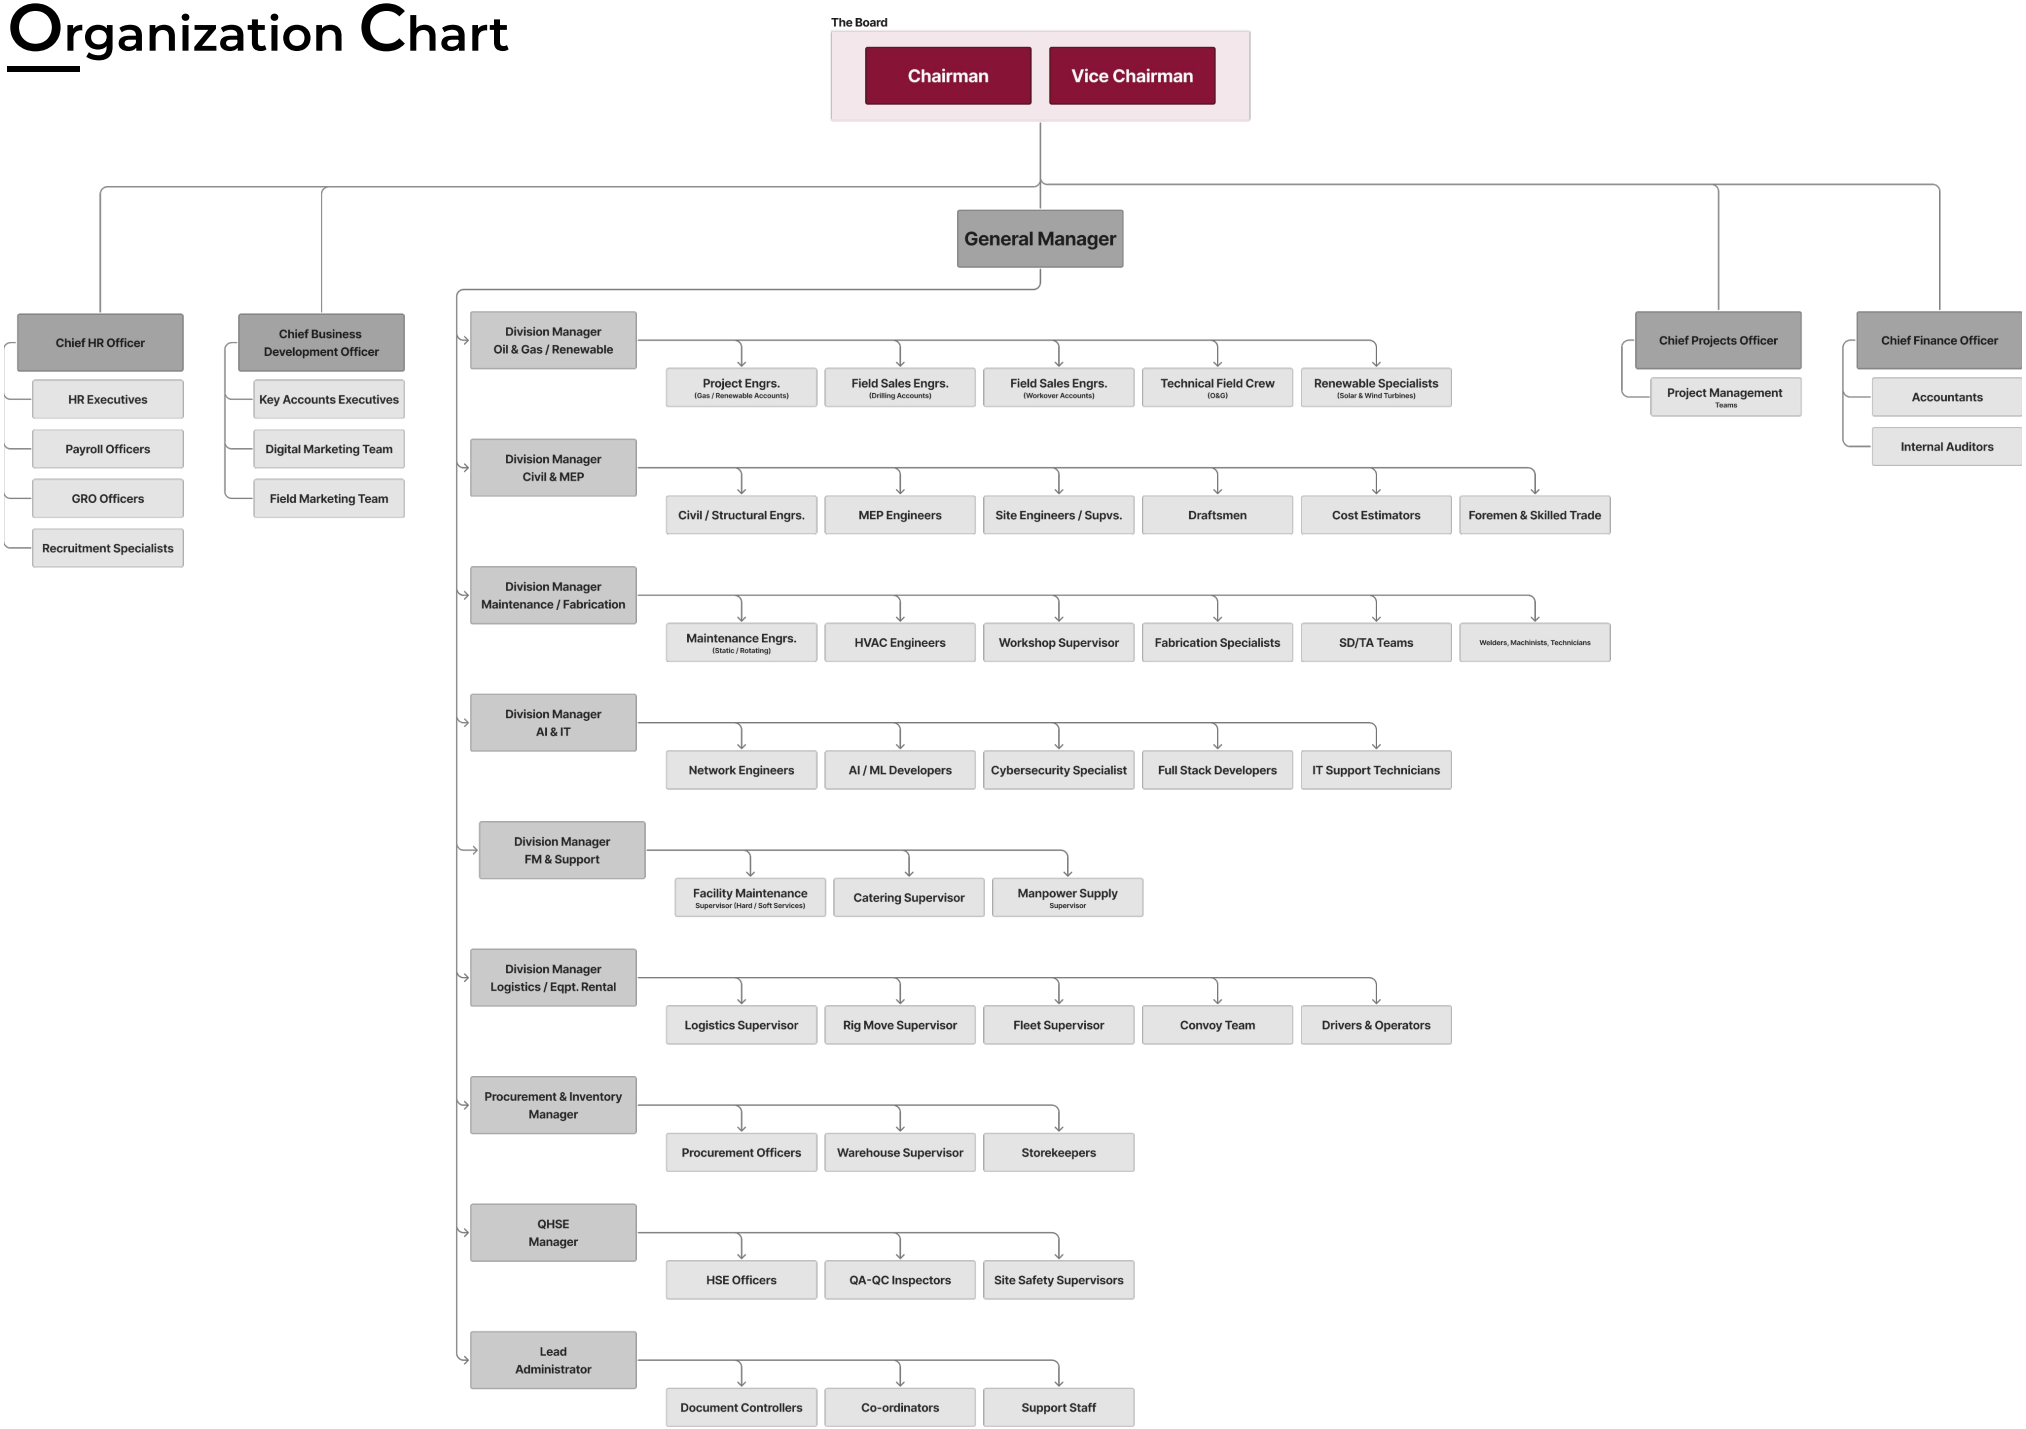

Industrial localisation sits at the heart of our approach. In line with Vision 2030 and iKTVA, we are actively building in-Kingdom capability for supply, commissioning, and ongoing services — bringing global expertise into the Kingdom while supporting the long-term self-sufficiency the nation is building toward.

From heavy equipment mobilisation across remote sites to network, AI, and integrated monitoring systems, Black Saber maintains the operational reach to support projects from initiation through to long-term asset management — to recognised standards of quality, safety, and environmental responsibility. We are proud of what Black Saber represents: not only as a contractor, but as a partner invested in the growth of the Kingdom. That is a responsibility we take seriously, and one we look forward to advancing alongside our clients.

Mr. Salman HR. Ahamed

Vice Chairman, BSI Group

Organization Chart

What we Do

From engineering and construction to maintenance, technology, and intelligent systems, we deliver across the full industrial lifecycle

One integrated capability

spanning heavy industry to advanced technology.

Our Services

Civil & Construction

- Excavation, earthworks & backfill
- Asphalt & road works
- Concrete works (foundations, slabs, structures)
- Precast & block works
- Fencing & perimeter security works
- Interlock & Tile Works
- Drainage & Water works
- Site development & grading
- Reinforced concrete & rebar works
- Waterproofing & protective coatings
- Finishing Works
- Demolition & site clearance

MEP & Electromechanical

- HVAC systems (supply, installation & commissioning)
- Plumbing & sanitary systems
- Storm-water systems
- Firefighting & fire-protection systems
- Pipeline Installation & Maintenance
- LV/MV electrical power distribution
- Instrumentation & control (E&I)
- Pre-engineered buildings (PEB)
- Lighting & power systems
- LV/MV/HV Cable installation & Termination
- Cable trays & containment systems
- MEP Testing, commissioning & handover

Plant & Industrial Services

- Plant maintenance (preventive & corrective)
- Shutdown & turnaround support
- Operations & maintenance (O&M) contracts
- Fabrication & workshop services
- Mechanical structures & steelworks
- Asset integrity services
- Rotating & static equipment maintenance
- Welding & machining services
- Valve & pump servicing
- Painting, blasting & surface treatment
- Insulation & refractory works
- Scaffolding & access services

Oil, Gas & Renewable

- Wellhead & surface facility works
- Drilling rig parts & components supply
- Rig equipment spares & consumables
- Rig up / rig down & mobilisation support
- Pipeline installation
- Skid fabrication & modular assembly
- Tank & storage facilities
- Corrosion protection & coating
- Solar PV installation & EPC
- Wind & clean-energy systems
- Substation & grid-connected works
- Renewable-energy EPC

IT & Technology

- OSP works (FTTH / FDT / FAT)
- Fiber optic cabling & splicing
- Copper structured cabling (Cat6/6A)
- Network infrastructure (switching & routing)
- Rack & data-centre management
- Point-to-point (P2P) & wireless backhaul
- WiFi & access-point deployment
- CCTV & surveillance systems
- Access control & integrated security
- Telecom & IP telephony (PABX)
- SCADA / DCS
- Custom software & AI development

Logistics & Heavy Transport

- Equipment rental
- Onshore rig moves
- Heavy haulage & transport
- Industrial logistics & mobilisation
- Fleet operations & management
- Crane & lifting services
- Low-bed & trailer transport
- Site mobilisation & demobilisation
- Material handling & storage
- Freight forwarding & customs
- Warehousing & inventory management
- HD Drivers & operators supply

Facility Management & Support

- Hard FM services
- Soft FM services
- Catering & camp services
- Manpower supply (skilled & unskilled)
- Asset Management Services
- Landscaping
- Waste management services
- Building maintenance & repairs
- Helpdesk & CAFM systems
- Fit-out & refurbishment
- Utility & energy management
- Support staff & administration

General Trading & Supply

- Industrial equipment & machinery
- Spare parts & consumables
- Electrical & mechanical materials
- Oilfield equipment & tools
- OEM product supply
- Safety & PPE equipment
- Instrumentation & control products
- Pipes, valves & fittings
- Cables & electrical accessories
- IT & networking hardware
- HVAC & refrigeration equipment
- Tools & workshop equipment

How we Deliver

Our Execution

01 — Enquiry & Site Assessment

Every project begins with a detailed site survey and technical evaluation. We define scope, assess conditions, and align on client objectives before work begins.

02 — Engineering & Design

Our engineering team develops detailed designs, drawings, and specifications. Each solution is reviewed for constructability, compliance, and performance.

03 — Procurement & Mobilisation

We source materials and equipment through qualified vendors and mobilise resources to site — managing logistics to keep delivery accurate and on schedule.

04 — Service Execution

Skilled teams execute civil, MEP, and installation works under strict QA-QC and HSE supervision — built to specification, to code, and to plan.

05 — Testing & Commissioning

Systems are inspected, tested, and commissioned to confirm full functionality, safety, and performance against project standards before handover.

06 — Handover & Support

We complete as-built documentation, training, and operational handover — backed by maintenance and lifecycle support that keeps assets running.

QHSE Commitment

At Black Saber, quality, health, safety, and environmental responsibility are not separate functions — they are built into how we plan, execute, and deliver every project. We are committed to protecting our people, safeguarding the environment, and delivering work that meets the standards our clients depend on.

Quality

We deliver to specification, to code, and to client requirements — the first time. A documented inspection and test regime governs every stage of work, ensuring quality is verified, not assumed.

Health & Safety

The safety of our workforce, clients, and communities comes before all else. We work to a zero-incident goal, supported by rigorous risk assessment, method statements, training, and continuous site supervision. No task is so urgent that it cannot be done safely.

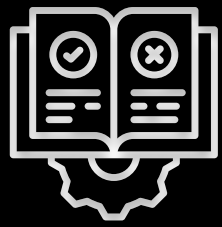

Environment

We plan and execute our work to minimise environmental impact — managing waste, resources, and emissions responsibly, and complying with all applicable regulations and client environmental requirements.

How We Deliver On It

- Aligned with ISO 9001, ISO 14001, and ISO 45001 frameworks
- Documented QHSE management system across all operations
- Risk assessment and method statements for every activity
- Ongoing training, toolbox talks, and competency development
- Continuous monitoring, auditing, and improvement

Code of Conduct

Black Saber conducts its business with integrity, transparency, and accountability. Our Code of Conduct defines the standards we uphold in every relationship — with clients, partners, employees, authorities, and the communities we serve.

Integrity & Ethics

We deal honestly and fairly, honour our commitments, and hold ourselves accountable for our conduct and outcomes.

Anti-Bribery & Anti-Corruption

We maintain a zero-tolerance policy toward bribery and corruption, and comply fully with all applicable anti-corruption laws.

Compliance & Governance

We operate in full compliance with the laws of the Kingdom and every jurisdiction in which we work, with governance that ensures responsible, transparent decisions at every level.

Fair Business & Competition

We compete on merit, respect confidentiality, protect client and partner information, and avoid conflicts of interest.

People & Workplace

We treat every employee with dignity and respect — committed to fair labour practices, equal opportunity, and full compliance with Saudi labour law.

Health, Safety & Environment

We uphold the highest standards of safety and environmental responsibility, protecting our people, clients, and the environment as a core condition of how we work.

Community & Localisation

We invest in local capability, support Saudi employment and iKTVA, and contribute to the growth of the communities we serve.

Our Standards

Black Saber is certified to internationally recognised management-system standards — independent, audited verification that quality, safety, and environmental responsibility are not aspirations, but embedded practice across every project we deliver. These certifications reflect a management system that is documented, measured, and continuously improved, and give our clients the assurance that the way we work meets globally benchmarked standards.

For the industries we serve — where safety is non-negotiable, quality is scrutinised, and environmental compliance is mandatory — certification is more than a credential. It is proof that our processes have been independently examined and found to meet the standards our clients depend on.

ISO 9001 — Quality Management

Our quality management system ensures that every process, control, and deliverable consistently meets client specifications, engineering codes, and contractual requirements. From engineering and procurement through to construction and handover, quality is planned, verified, and documented at every stage — delivered right the first time, not corrected after the fact. This systematic approach reduces rework, protects schedules, and gives clients confidence in the integrity of every output.

ISO 14001 — Environmental Management

Our environmental management system provides a structured framework for identifying, managing, and minimising the environmental impact of our operations. We manage waste, resources, and emissions responsibly, comply fully with regulatory and client environmental requirements, and continually seek to reduce our footprint. This commitment supports both the sustainability goals of the Kingdom and the environmental expectations of the operators we serve.

ISO 45001 — Occupational Health & Safety

Our occupational health and safety management system is built to protect every person on our sites. Through systematic hazard identification, risk assessment, control, and continuous improvement, we work toward a single uncompromising goal: zero incidents. Safety is embedded into planning and execution — supported by training, supervision, and a culture in which no task proceeds unless it can be done safely.

A Living System

Certification is maintained through documented procedures, regular internal audits, and independent external surveillance audits by our accredited certification body. Our management systems are reviewed and improved continuously — ensuring they remain effective in practice, not just on paper. For our clients, this means a partner whose standards are verified, current, and consistently applied on every engagement.
